

产品货号: APRab04486

产品概述 (Summary)

产品名称 (Production Name) Connexin 43 (phospho Ser368) Rabbit Polyclonal Antibody

描述 (Description) Rabbit Polyclonal Antibody

宿主 (Host) Rabbit

应用 (Application) WB,IHC-P,IF-P,IF-F,ICC/IF,ELISA

种属反应性 (Reactivity) Human, Mouse, Rat

产品性能 (Performance)

Unconjugated 偶联物 (Conjugation)

修饰 (Modification) Phospho Antibody

同种型 (Isotype) IgG

克隆 (Clonality) Polyclonal 形式 (Form) Liquid

Store at 4°C short term. Aliquot and store at -20°C long term. Avoid 存放说明 (Storage)

freeze/thaw cycles.

Liquid in PBS containing 50% glycerol, 0.5% BSA and 0.02% New type 储存溶液 (Buffer)

preservative N.

纯化方式 (Purification) Affinity purification

免疫原信息 (Immunogen)

GJA1 基因名 (Gene Name)

GJA1; GJAL; Gap junction alpha-1 protein; Connexin-43; Cx43; Gap junction 43

别名 (Alternative Names) kDa heart protein

2697.0 基因 ID (Gene ID)

P17302. The antiserum was produced against synthesized peptide

derived from human Connexin 43 around the phosphorylation site of 蛋白 ID (SwissProt ID)

Ser368. AA range:332-381

产品应用 (Application)

WB 1:500-1:2000, IHC-P 1:100-1:300, ELISA 1:20000, IF-P/IF-F/ICC/IF 1:50-200 稀释比 (Dilution Ratio)

E-mail: order@enkilife.cn (销售) tech@enkilife.cn (技支持) Web: https://www.enkilife.cn Tel: 027-87002838 产品名称: Connexin 43 (phospho Ser368) Rabbit Polyclonal Enkilife

Antibody

产品货号: APRab04486

蛋白分子量 (Molecular Weight) 43kDa

研究背景 (Background)

This gene is a member of the connexin gene family. The encoded protein is a component of gap junctions, which are composed of arrays of intercellular channels that provide a route for the diffusion of low molecular weight materials from cell to cell. The encoded protein is the major protein of gap junctions in the heart that are thought to have a crucial role in the synchronized contraction of the heart and in embryonic development. A related intronless pseudogene has been mapped to chromosome 5. Mutations in this gene have been associated with oculodentodigital dysplasia, autosomal recessive craniometaphyseal dysplasia and heart malformations. [provided by RefSeq, May 2014], caution: PubMed: 11741837 reported 2 mutations (Phe-11 and Ala-24) linked to non-syndromic autosomal recessive deafness (DFNBG). These mutations have subsequently been shown (PubMed:12457340) to involve the pseudogene of connexin-43 located on chromosome 5., caution: PubMed: 7715640 reported a mutation Pro-364 linked to congenital heart diseases. This was later shown (PubMed:8873667) to be an artifact, disease: Defects in GJA1 are a cause of hypoplastic left heart syndrome (HLHS) [MIM:241550]. HLHS refers to the abnormal development of the left-sided cardiac structures, resulting in obstruction to blood flow from the left ventricular outflow tract. In addition, the syndrome includes underdevelopment of the left ventricle, aorta, and aortic arch, as well as mitral atresia or stenosis., disease: Defects in GJA1 are the cause of autosomal dominant oculodentodigital dysplasia (ODDD) [MIM:164200]; also known as oculodentoosseous dysplasia. ODDD is a highly penetrant syndrome presenting with craniofacial (ocular, nasal, dental) and limb dysmorphisms, spastic paraplegia, and neurodegeneration. Craniofacial anomalies tipically include a thin nose with hypoplastic alae nasi, small anteverted nares, prominent columnella, and microcephaly. Brittle nails and hair abnormalities of hypotrichosis and slow growth are present. Ocular defects include microphthalmia, microcornea, cataracts, glaucoma, and optic atrophy. Syndactyly type III and conductive deafness can occur in some cases. Cardiac abnormalities are observed in rare instances, disease: Defects in GJA1 may be the cause of syndactyly type III (SDTY3) [MIM:186100]. Syndactyly is an autosomal dominant trait and is the most common congenital anomaly of the hand or foot. It is marked by persistence of the webbing between adjacent digits, so they are more or less completely attached. In this type there is usually complete and bilateral syndactyly between the fourth and fifth fingers. Usually it is soft tissue syndactyly but occasionally the distal phalanges are fused. The fifth finger is short with absent or rudimentary middle phalanx. The feet are not affected, function: One gap junction consists of a cluster of closely packed pairs of transmembrane channels, the connexons, through which materials of low MW diffuse from one cell to a neighboring cell., function: One gap junction consists of a cluster of closely packed pairs of transmembrane channels, the connexons, through which materials of low MW diffuse from one cell to a neighboring cell. May play a critical role in the physiology of hearing by participating in the recycling of potassium to the cochlear endolymph., similarity: Belongs to the connexin family, similarity: Belongs to the connexin family. Alpha-type (group II) subfamily, subunit: A connexon is composed of a hexamer of connexins, subunit: A connexon is composed of a hexamer of connexins. Interacts with SGSM3. Interacts with KIAA1432/CIP150, tissue specificity: Expressed in the heart and fetal cochlea.,
